

How to solve the problem of several cameras on one long cable?

In IP surveillance installations, one often encounters limitations due to the existing infrastructure: the inability to run new cables, the need to run several cameras on a single UTP cable or the distance between points being too great. In such situations, the APT-4-11-CA1 PoE switch, enclosed in an IP68 sealed housing and designed for outdoor use, is the perfect solution.

The device allows up to three PoE receivers (e.g. IP cameras) to be connected and powered using a single network cable. It can be used as a splitter - allowing additional cameras to be added where an installation already exists - or as a LAN + PoE extender, extending the transmission range beyond the standard 100 m.

Thanks to the Long Range 150 m mode, stable port operation and full power is maintained in cable sections reaching 150 m, eliminating the need for additional active intermediate components. An additional advantage is the ability to cascade the devices, allowing extensive network structures to be created based on a single feeder cable.

The APT-4-11-CA1 can also be powered locally via an additional screw connector, giving the installer flexibility in designing distribution points. The device complies with IEEE 802.3af/at/bt standards as a receiver and 802.3af/at on the output ports.

The housing provides full weather protection (IP68) and a variety of mounting options - either on a flat surface or on a pole using an adapter. This allows the switch to be used in virtually any outdoor environment, regardless of conditions.

100% Technical Backup on Everything We Sell

Adastra RM480 Mixer Amplifier "Delivering a massive 480 watts of clean, reliable power, enough to drive multiple zones with clarity and impact."

- DAB+/FM radio, Bluetooth, USB / SD
- Control up to 4 zones plus 1 all-area
- Crystal-clear sound for music and mics
- Voice-over priority & mute
- Reliable 230V or 24V power
- 2U 19" rack mountable

HiLook IPC-T269HAD-LUF/SL *180° field of view

Get a full 180° view from a single camera with the HiLook dual-lens stitched wide-angle ColorVu dome. With 6MP resolution, Smart Hybrid Light, two-way audio, strobe and audio alarms, plus many more advanced features, it's a must-have for any CCTV system.

Slx 15 Metre Cable Reel with 2200 Lumen Worklight

3-socket 15m extension reel with overload trip for safety. 2200-lumen dimmable LED lamp ensures bright visibility in dark attics or outdoor areas. IP44 dust/splash protection and thermal cut-out prevent overheating. High-visibility yellow cable reduces trip hazards.

Power - Light - Safety
